Description

Whether you are matching a knockdown patch or spraying small rooms the SPRAYNOZ Drywall Texture Spray Tube is for you! If you have ever tried to spray or match knockdown texture then you know it can be very difficult. Even using a commercial spray rig you are trying to match another tool's spray job. A perfect match is next to impossible even for the seasoned professional. There are no other knockdown patch spray tools on the market quite like the SPRAYNOZ drywall texture spray tube. With properly mixed drywall mud and an air source appropriate to the size of the job; our texture tube creates professional results every time.

We completely revolutionized matching knockdown patches for anyone. The difference from our product compared to using a hopper to spray knockdown is that the SPRAYNOZ Spray tube will create the texture outside of the spray tube like a professional spray rig. No need for expensive equipment or labor.

Our traditional spray tubes are made with quality parts designed to handle day to day abuse and continue to perform flawlessly. With some practice, you should be able to match any knockdown texture on ceiling/walls with professional results.

Setup

Mix material to be sprayed to desired thickness (usually to a pancake batter consistency or thinner). The section below provides details for tip selection based on desired texture types. The finished texture results are based on air pressure, rate of handle depression, and nozzle adjustment. Some practice will be necessary for professional results and spraying samples is suggested. (Note: Spraying Samples will help with getting the perfect match.)

Spray Nozzle Setup:

- Select the tip: Knockdown, Splatter/Lite Knockdown, or Orange Peel

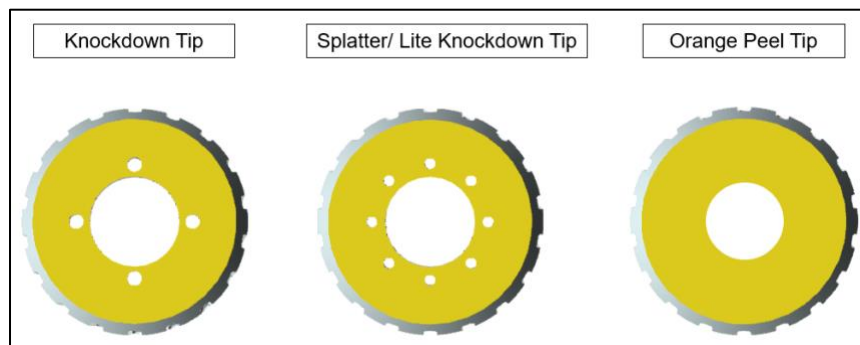

Figure 1: Tip Descriptions

- Relocate the O-ring on the Fluid Nozzle based on tip selection

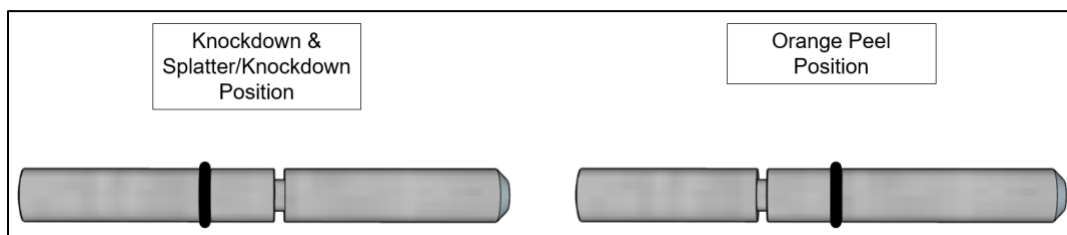

Figure 2: Fluid Nozzle Positions

- Ensure the Set Screw is loose and insert the Fluid Nozzle into the SPRAYNOZ Main Body. Once the Fluid Nozzle is firmly seated tighten Set Screw (Snug Only Do Not Over Tighten) and then install the Knockdown Tip.

Operating Instructions

To Fill:

- Remove Spray Nozzle (unscrew)
- Insert tube end into the material to be sprayed
- Pull back on the handle to suck up the material (do not overfill)
- Clean end of the tube with a sponge
- Screw the spray nozzle back on the tube
- Plug in the air hose and adjust air pressure to 25 - 45 lbs (depending on the texture)
- Depress handle to start spraying
